Opportunities

How might we help people capture, organize and find notes again, without having to learn Markdown first?

Notes get lost across too many places

Scattered

Notes live on the phone, the laptop, paper and chat apps.

Unsearchable

Handwriting, screenshots and scans cannot be searched.

Forgotten

Deadlines slip, and work is lost when offline.

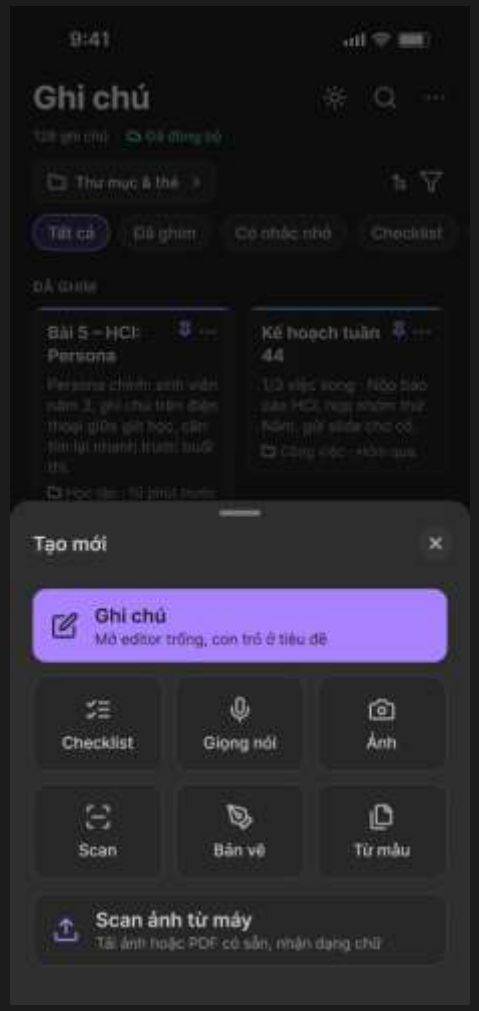

Too complex

Many tools ask users to learn syntax before they can start.

“My notes are everywhere... When I need one, I can never find it.” Thư, primary persona

One app for every kind of note

- Capture text, voice, photos, scans, checklists, tables and formulas
- Organize with folders, smart folders and tags
- Search inside photos and PDFs
- Revise with flashcards made from your notes
- Reminders, auto-save, offline work and sync

Project brief

Brand	Opportunities
Client	Course project, no external client
Audience	Students, tutors, knowledge workers
Platforms	iOS, Android and web
Budget	N/A, academic project
Objective	Keep every note in one place, and make it easy to find

Two personas, two ways of working

Scenario: a day with Thư

07:55

On the bus

Dictates a meeting note by voice

09:40

In class

Scans the whiteboard, checks the recognized text

17:30

Reminder

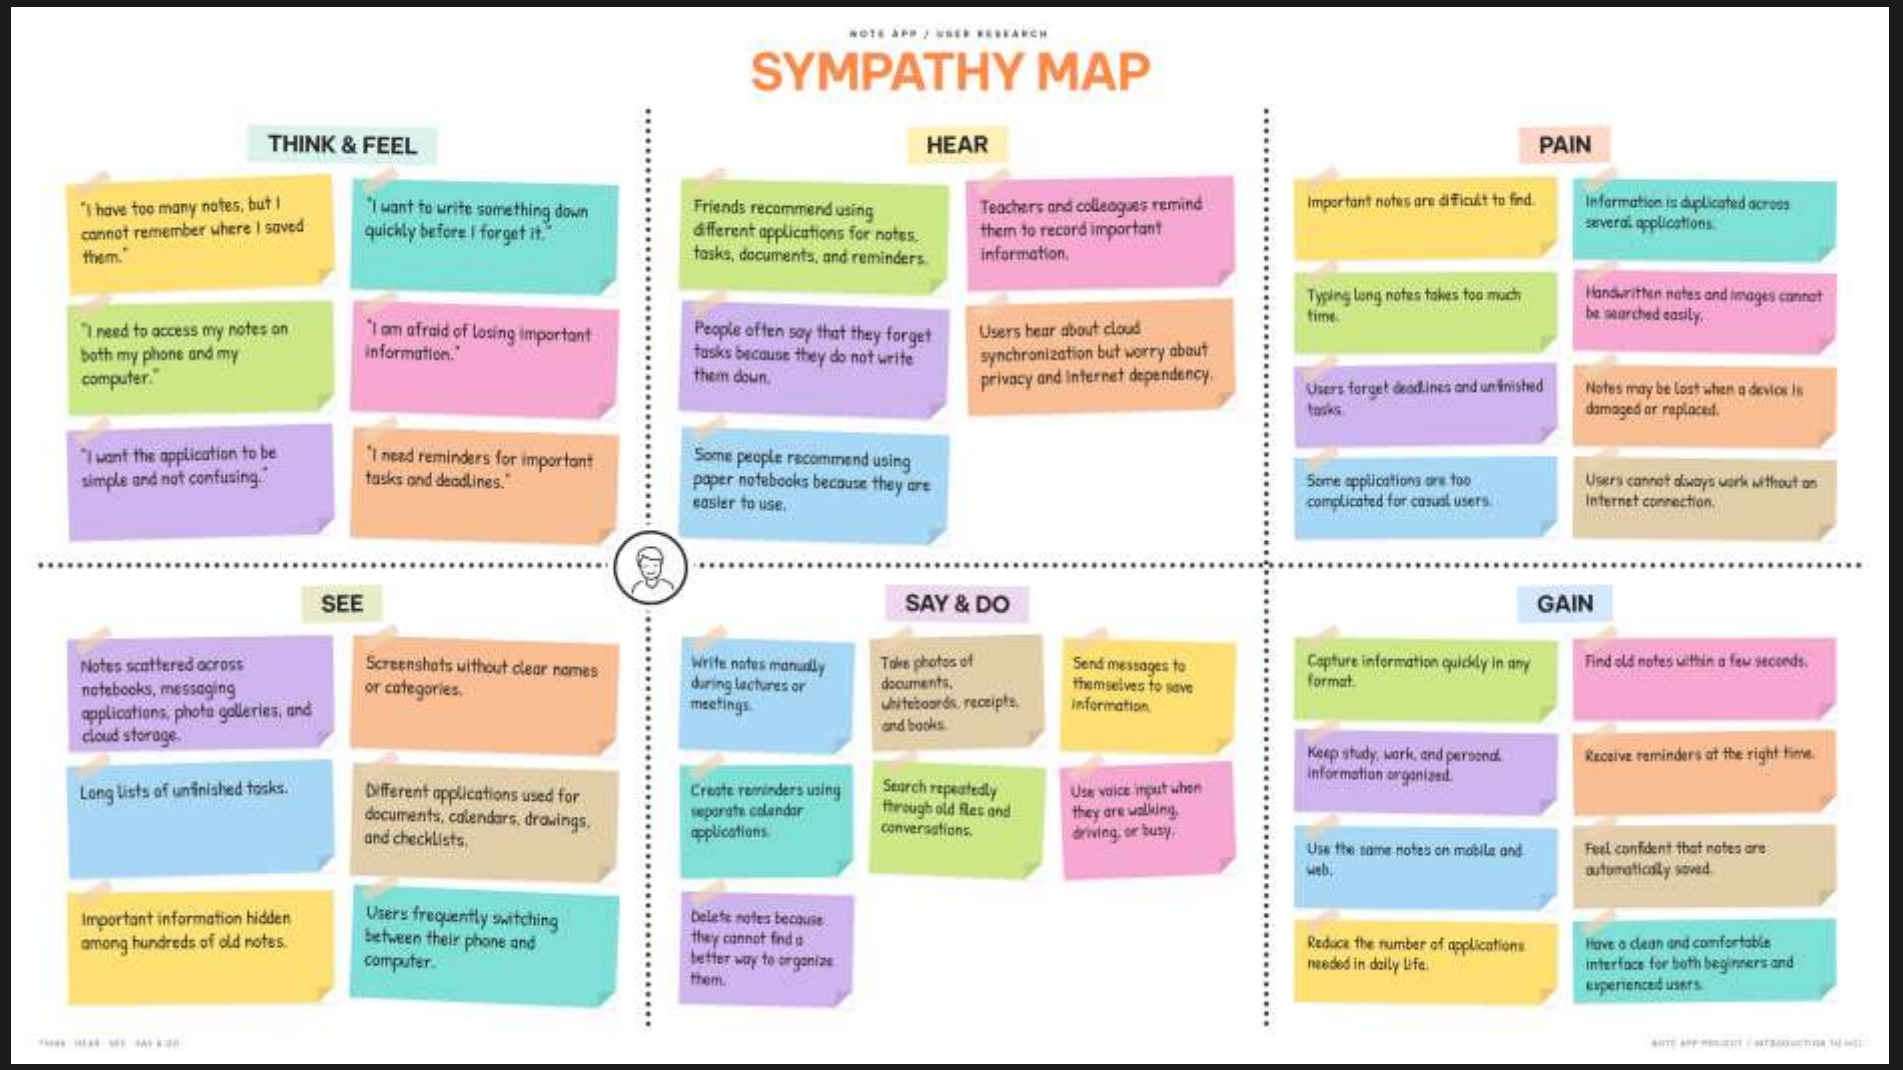

Marks a tuition fee as collected

23:00

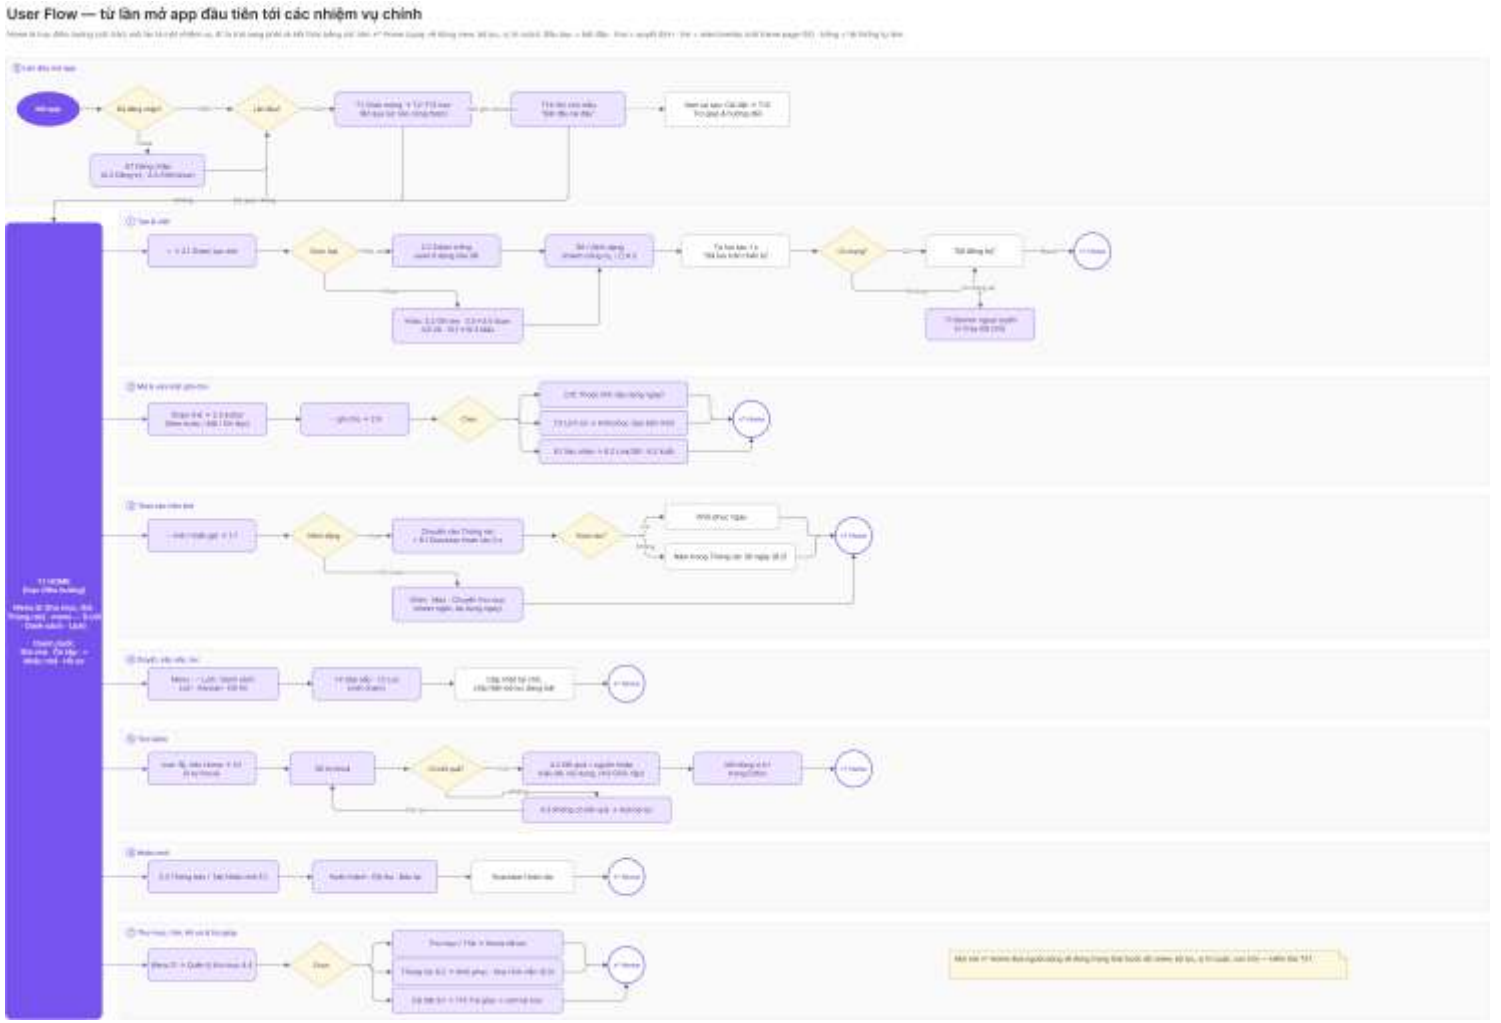

Before the exam

Finds a word inside this morning’s scan, then reviews flashcards

Sympathy map

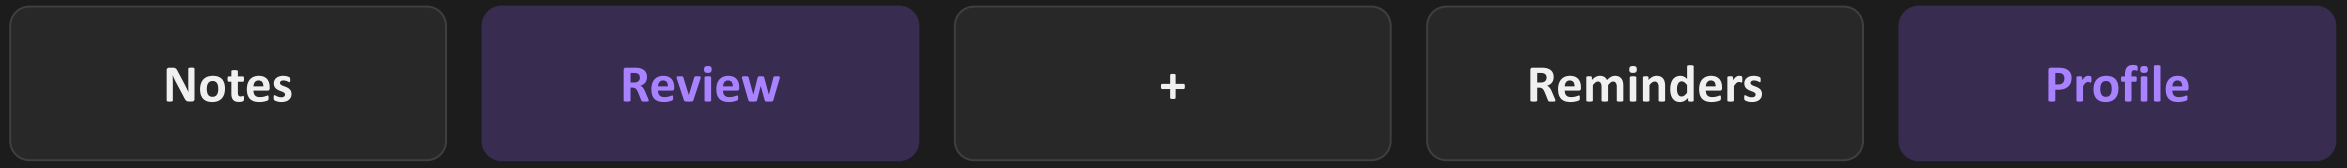

Flow chart

Navigation after review

Bottom bar

Home

Spacious header in the style of Samsung Notes. ☰ opens Pinned, Trash, folders and tags. ⋯ holds views, sort and filter.

Folders

A dedicated screen like Apple Notes: search, all notes, folders, smart folders, tags.

Profile

All settings on one screen: account, writing, notifications, sync, security, and other settings.

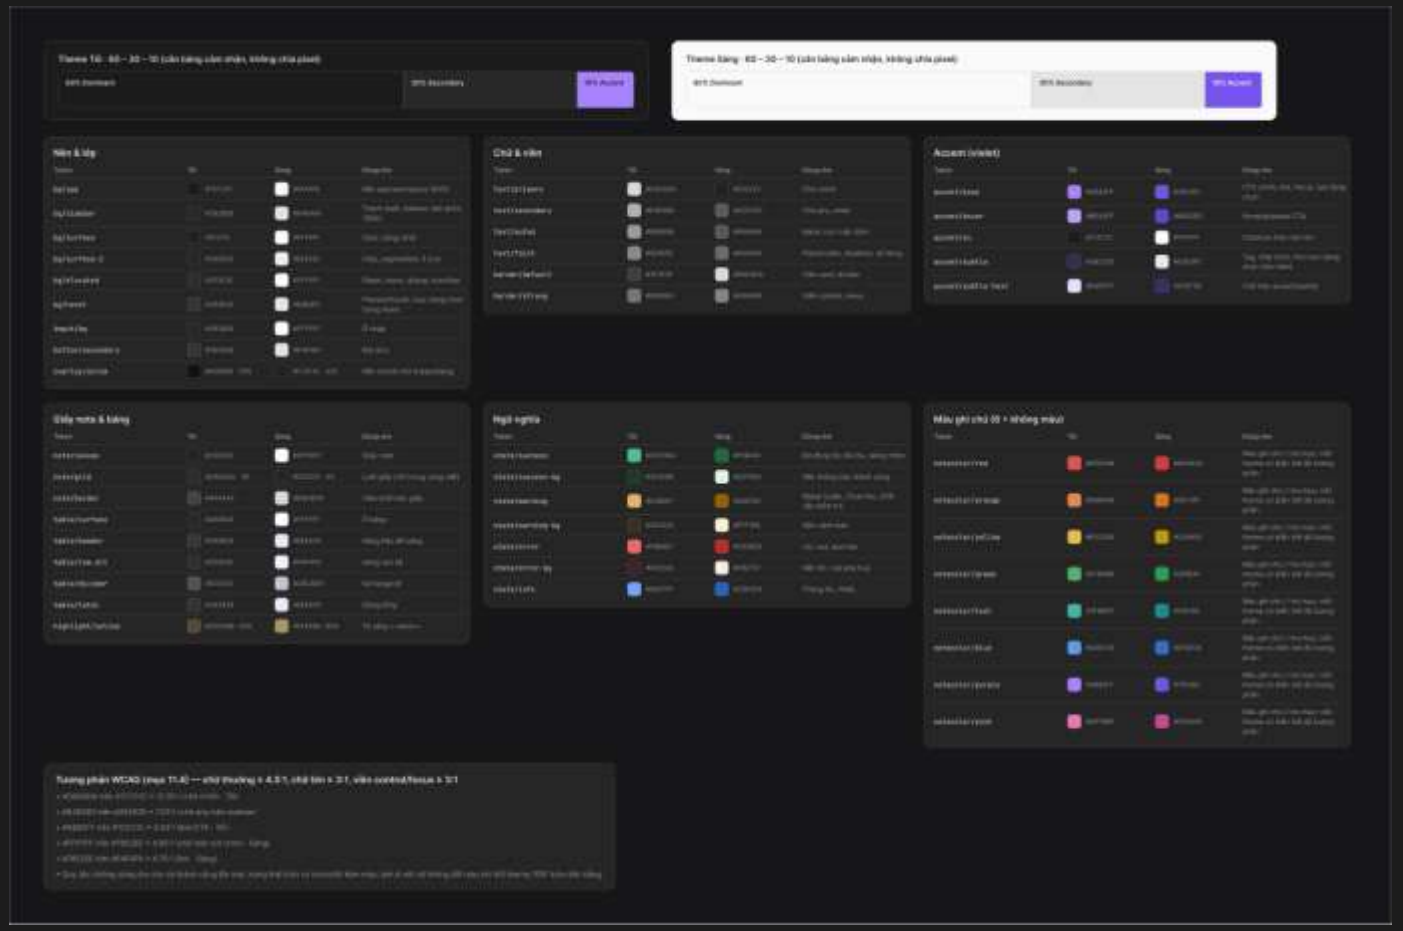

UX wireframes

- Low-fidelity gray blocks, no icons or real data
- One wireframe per mobile screen in the main sections
- Each carries a note on the HCI reasoning
- Kept in sync after the lecturer’s review

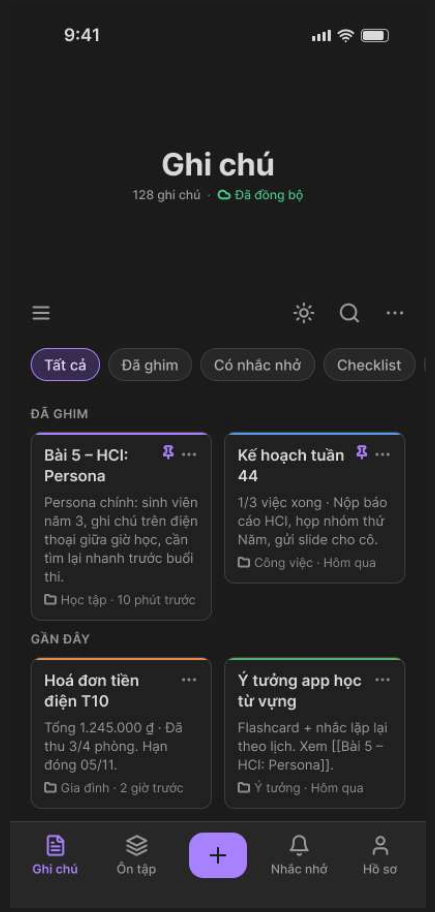

Design system

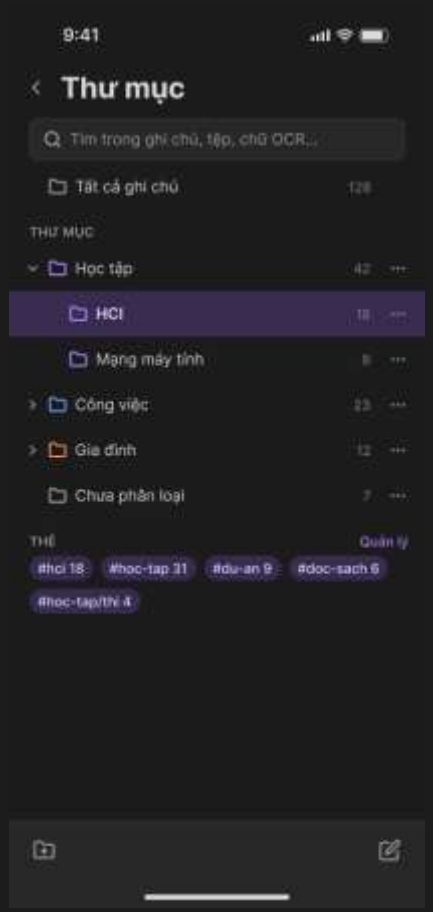

- Charcoal neutrals with one violet accent
- Dark and Light themes from shared tokens
- Inter typeface and line icons
- Reusable components across every screen

Mobile prototype

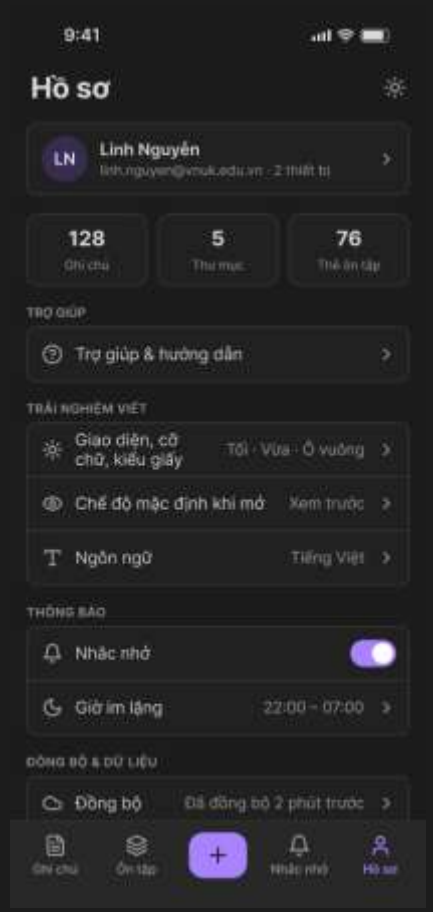

Home

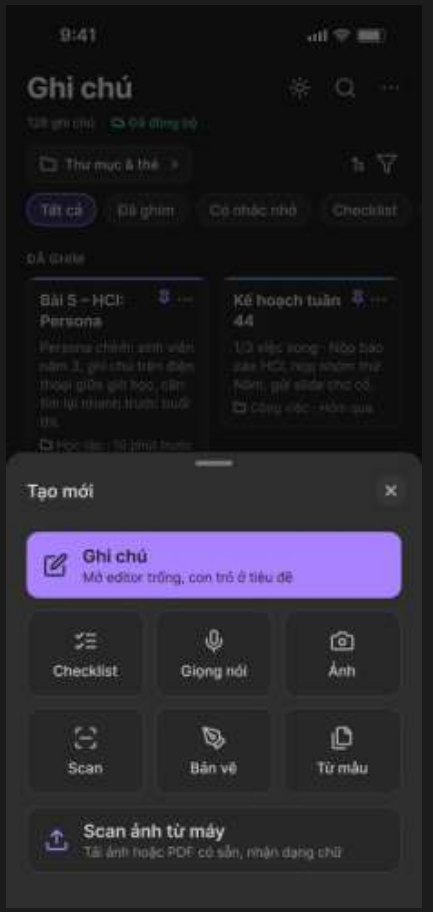

Folders

Review

Profile

Create

What changed after lecturer review

Home

Views moved into the ⋯ menu; roomier header

Review tab

Replaces the Search tab; search stays on Home

Profile tab

Replaces Library; holds all settings on one screen

Folders screen

Opened from the ☰ menu, like Apple Notes, with smart folders

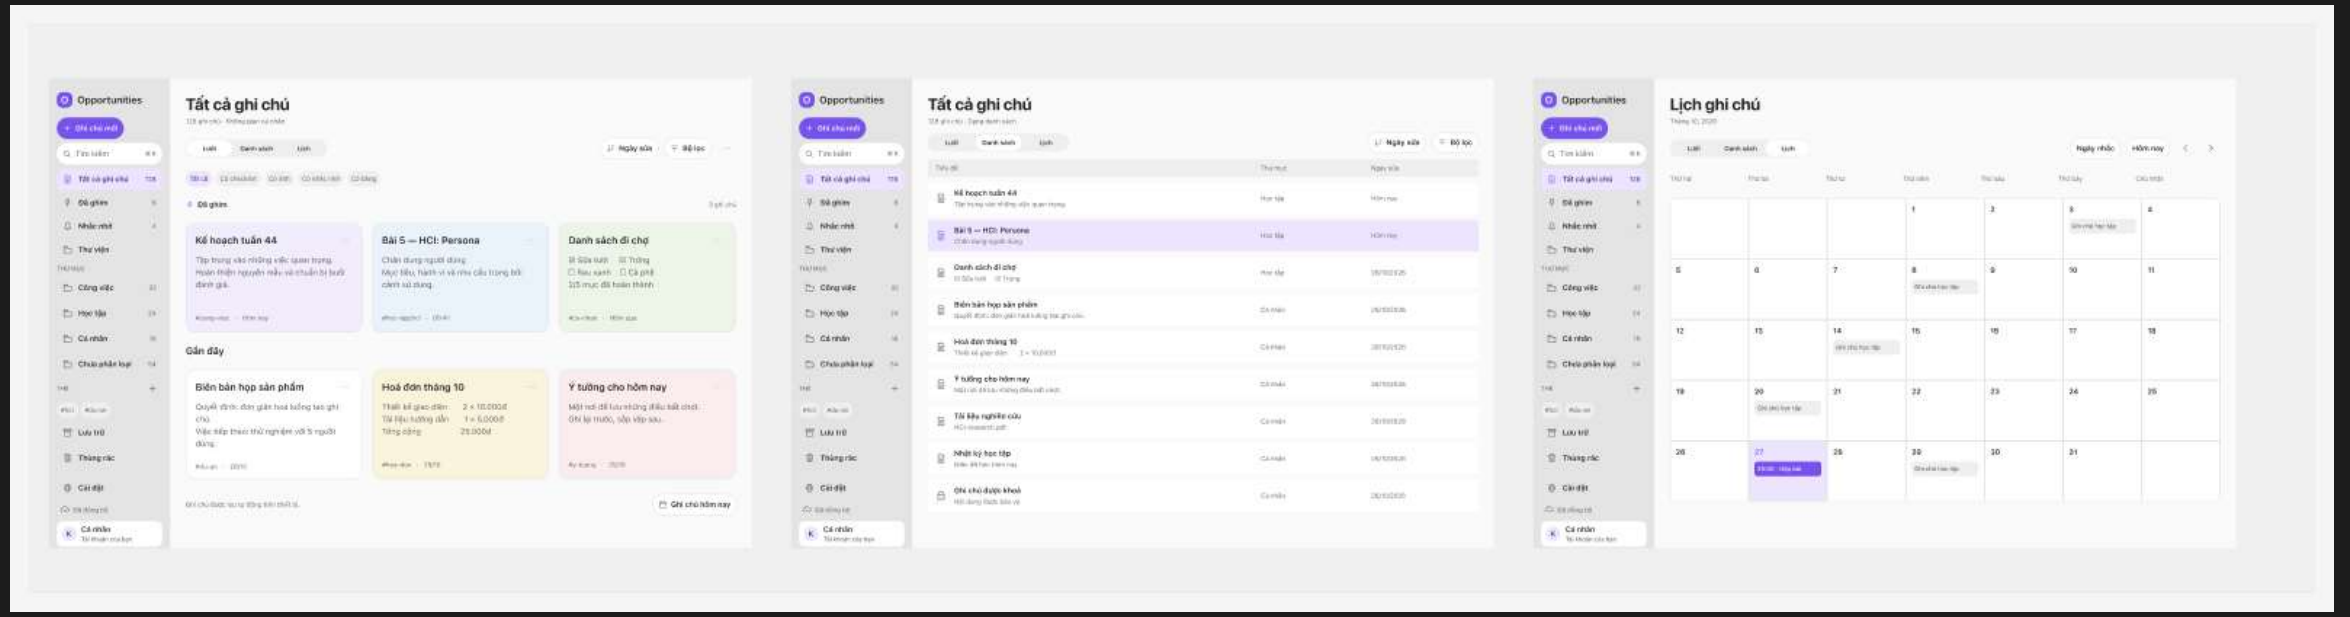

Lock icon

Recolored to match the violet palette

Scan from device

Pick an image or PDF when adding a note

Web prototype

The same note app adapted for desktop, with a sidebar and keyboard shortcuts.

Test cases and usability targets

Planned targets, not yet measured

≤ 2	≤ 3	0	80+
taps to capture a note	actions to find any note	notes lost	SUS score

- Save a whiteboard photo so it can be found later: 4 taps or fewer
- Find a word that appears only inside a photo: 3 actions or fewer
- Restore a note deleted by mistake: 2 taps or fewer

Next steps

1. Run usability tests with 5 participants per persona
2. Iterate on any task under 80 percent success
3. Bring the web prototype in line with the updated mobile navigation

Thank you

Questions and feedback are welcome
